Abstract of JP 2221102 (A)

PURPOSE:To continuously and easily obtain optionally perfumed oxygen-enriched air for a long time by supplying air to an oxygen enriching membrane module to produce oxygen-enriched air and arranging a perfume in the air passage.
CONSTITUTION:A vacuum pump 3 is connected to the oxygen enriching membrane module 1 more permeable to oxygen than to nitrogen through a vacuum pump 2. A perfume 5 is arranged in the exhaust line 4 of the vacuum pump 3 or in the air passage on the upstream side of the module 1. The vacuum pump 3 is operated to depressurize the module 1, hence air is introduced into the module 1, and oxygen-enriched air is produced and perfumed with the perfume 5. The perfumed oxygen-enriched air is discharged from the exhaust line 4 and used for refreshment before and after sports and so on.
